## Keywords

Nature, Connotea

## Abstract

Nascent reported that Nature Network v2 has gone life. Never too anxious to try something new, I created an account and signed in. I even joined two groups: Bioinformatics and Semantic Web for the Life Sciences.

[Nascent](#) reported that [Nature Network v2](#) has gone life. Never too anxious to try something new, I created an account and signed in. I even joined two groups: *Bioinformatics* and *Semantic Web for the Life Sciences*.

But, when I tried to create a new group, the system fails. I promised me to send me email for confirmation. Tried it twice via my [Sourceforge](#) email account. No email. I then changed my email for my Nature account to my Gmail address. Still no email...

I am not located in Boston or London, is that the problem? Is being 'global' not good enough? Is the requirement to have two 'o's in the name? Cologne then, maybe?

## (Missing) Features

For the rest, the system seems interesting. I am not too fond of having to create accounts all over the place (*what was the password again???*), but looks promising. The thing I missed most when filling out my profile was a feature to import the list of my publications from [Connotea](#).

Another thing I missed, was the ability to mention my blog(s) in my profile. May I put this in as request too? BTW, is there a group or forum on Nature Network where I can file these things?
