Jmol, Bioclipse

Abstract

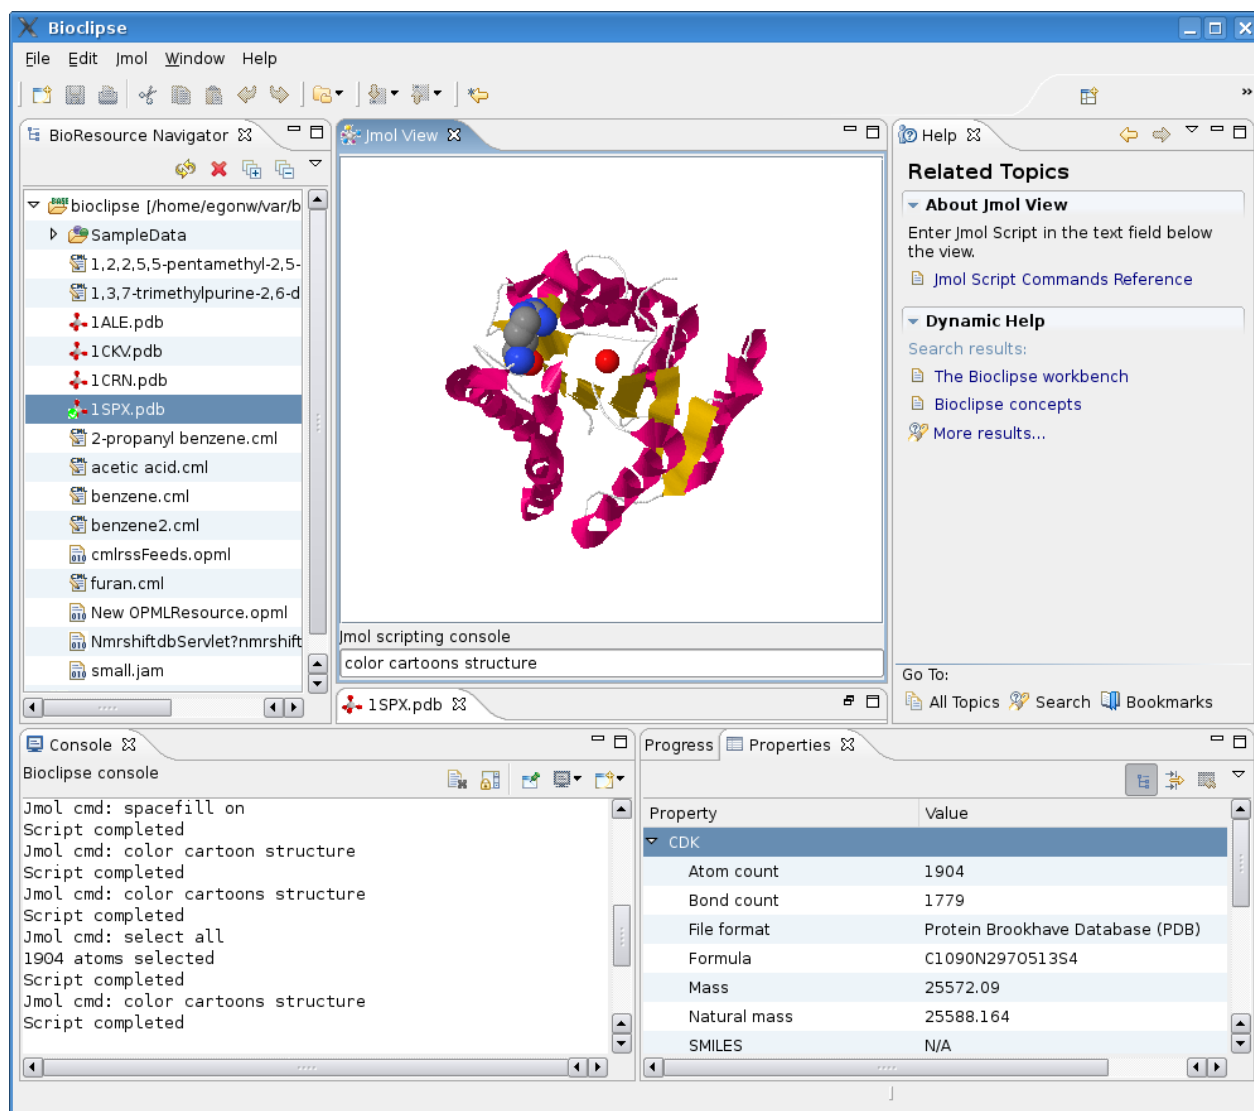

The Eclipse Rich Client Platform (RCP) is very powerfull, and takes a lot of architectural things of your hand when developing a bio- and chemoinformatics GUIs. Bioclipse is based on it. One thing the RCP offers is a Help View which works with plain (X)HTML files, and one neat feature is the context help. It is help shown in the Help View when one focused on a specific GUI element.

The [Eclipse Rich Client Platform \(RCP\)](#) is very powerful, and takes a lot of architectural things of your hand when developing a bio- and cheminformatics GUIs. [Bioclipse](#) is based on it. One thing the RCP offers is a Help View which works with plain (X)HTML files, and one neat feature is the context help. It is help shown in the Help View when one focused on a specific GUI element.

As an example, the below figure gives the context help for the JmolView in the [Jmol](#) plugin ([bc_jmol](#)) plugin for Bioclipse:

On the right side of the Jmol view (showing [1SPX](#)) is the Help View, showing the context help for the Jmol View pointing to the 'Jmol Script Commands Reference'.
