## chem-bla-ics

The [Eclipse Rich Client Platform \(RCP\)](#) is very powerful, and takes a lot of architectural things off your hands when developing bio- and cheminformatics GUIs. [Bioclipse](#) is based on it. One thing the RCP offers is a Help View which works with plain (X)HTML files, and one neat feature is context help. It is help shown in the Help View when one is focused on a specific GUI element.

As an example, the below figure gives the context help for the JmolView in the [Jmol](#) plugin ([bc\\_jmol](#)) for Bioclipse:

On the right side of the Jmol view (showing [1SPX](#)) is the Help View, showing the context help for the Jmol View pointing to the 'Jmol Script Commands Reference'.
