Dear Advisory Board,

Ola Spjuth has recently been working on a extensive QSAR environment in [Bioclipse](#), and molecular descriptors are provided using remote services but also using the [CDK](#). The CDK has a relatively large collection of QSAR descriptors, but certainly not the full list discussed in the [Handbook of Molecular Descriptor](#).

I'm sure everyone would appreciate a few more descriptors, and I am wondering which ones you would assign priority to. So:

which QSAR descriptors would you like to see implemented in the CDK?

Looking forward to hearing from you, preferable as comment in this blog, or via email to [cdk-user](#) mailing list or directly to me otherwise. Make sure to include a full reference to the paper that describes the algorithm.

Kind regards,

Egon
