Carmen liveblogged via [her twitter account](#) the disclosures of drug candidates at the past ACS meeting, and later [aggregated the tweets in her blog](#). While many of her tweets made it into the [FriendFeed room](#), the structure she drew up and shared did not make it. And until just now, I was not aware she had tweeted those too. The first twitpic she pushed was:

and I hope they will all end up in [ChemPedia](#). I've done the above (6-2018-7215-8416):

Each structure I have transcribed, I will tweet with the tags [#acs_sf](#) and [#chempedia](#), like in:

@carmendrah1 <http://twitpic.com/1a3b3v> -> <http://ur1.ca/wfar> [#chempedia](#) [#acs_sf](#)

Oh, and if you happen to know the drug candidates name (or company code), please do deposit it in ChemPedia!
