Update 2021-02: this post is still the second-most read post in my blog. Welcome! Some updates:

- Ammar Ammar in our BiGCaT group has set up a [new SPARQL endpoint](#). Please use and tweet, blog, or otherwise let others know how you use the ChEMBL RDF.
- Since this post I have [blogged a lot more about ChEMBL](#).

Update: this work is now written down in [this paper](#).

I'm having a really bad month, as you can see from the number of posts. Too much to do, too little time. One of the things I have been doing in the past weeks is update the RDF for [ChEMBL](#), now up to version 09. The [SPARQL end point](#) has not been updated yet (which is still at ChEMBL 04), but you can now download the triples for self-hosting here. Like the database itself, the RDF is available under the [CC-SA-BY license](#), requiring attribution to both the ChEMBL team as well as our efforts to create the RDF (see this [README](#)).
