Abstract

Joerg Wegner recently blogged about Chemogenomics: structuring the drug discovery process to gene families by C.J. Harris and A. P. Stevens in Drug Discov Today (DOI: 10.1016/j.drudis.2006.08.013). This review article provides a nice overview of a trend in mathematical modelling of the interaction of small organic molecules with proteins, often referred to as QSAR.

Joerg Wegner recently [blogged](#) about *Chemogenomics: structuring the drug discovery process to gene families* by C.J. Harris and A. P. Stevens in Drug Discov Today (DOI: [10.1016/j.drudis.2006.08.013](https://doi.org/10.1016/j.drudis.2006.08.013)). This review article provides a nice overview of a trend in mathematical modelling of the interaction of small organic molecules with proteins, often referred to as QSAR. What the article does not discuss, is the [work by the group of Jarl Wikberg](#) who coined the term proteochemometrics (see PubMed: [11342268](https://pubmed.ncbi.nlm.nih.gov/11342268/)).
