Welcome to the Serious Request 2024 - MetaKids page.

The [Serious Request](#) 2024 action is to raise funding for [MetaKids](#), a Dutch foundation that aims for a world in which metabolic diseases can be treated or prevented and where no kid has to suffer from these diseases.

This WikiPathways actions aims to raise funding for the Serious Request 2024 action and in return we will work in December on improving the digitalized versions of the latest literature about the biological process that are behind or could perhaps explain these metabolic diseases.

This page lists the pathways we worked on during the action or are otherwise relevant to the work by the MetaKids foundation. We further have [this project board](#) to monitor the specific tasks, in an open notebook science sense. Also, a dedicated [curation website](#) is maintained.

See also the "WikiPathways in actie voor MetaKids" [page](#) where you can donate money for MetaKids. It has been reported that people outside The Netherlands can use PayPal to make donations.
