Keywords

Nintendo, Linux, Postgenomic

Abstract

On my desktop, the Scintilla and Postgenomic.com websites do not work. It is not a browser problem, but has something to do with TCP/IP packages not reaching its destination: the browser. Euan told me they are aware of the problem, but apparently have not found a solution yet.

On my desktop, the [Scintilla](#) and [Postgenomic.com](#) websites do not work. It is not a browser problem, but has something to do with TCP/IP packages not reaching its destination: the browser. Euan told me they are aware of the problem, but apparently have not found a solution yet.

However, my [Wii](#) does not have the problem, which makes me wonder if it is a disagreement between the [Nature](#) server and my [Linux kernel](#)... Anyway, this is what the two website look like (first Scintilla, then Postgenomic.com):

(BTW, that was one [very nice piece of work by Rich](#) ! Make sure to also read the [follow up](#)).

The only real disadvantage is that it does not integrate well with the things I do daily. If I see some interesting post, and would like to tag it on [my del.icio.us account](#), I have to google for it on my desktop :(
