Tobias [committed Jumbo 5.0](#) to CDK CVS, so that the CDK is now again up to date with the latest [CML](#) library. Note that Jumbo 5.0 requires Java 5.0.

At first all JUnit tests seems to work, but apparently the [CML2Writer](#) tests were skipped because they were only run when Java 1.4 was found. I updated the test for the a appropriate Java version, and then it turned out that most tests fail. So those running CDK from CVS and depent on CML writing: hang on, it will be fixed very soon.
