Abstract

KDE 3.5 was released with lots of changes. SuperKaramba is now a standard KDE application and is neatly integrated. It allows embedding themelets on your desktop background.

chem-bla-ics

KDE 3.5 was [released](#) with [lots of changes](#). SuperKaramba is now a standard KDE application and is neatly integrated. It allows embedding themelets on your desktop background.

It shows several themelets: the weather, a calendar, a toolbar with applications, a [FoldingAtHome monitor](#), the contents of the clipboard, the music that is playing ([Cake](#)) and a simple todo list. All customizable up to the pixel.

And before I forget: a nice new [Kalzium](#) release!
