Published September 17, 2010

## Citation

Willighagen, E. (2010). A list of things I miss in CiteULike. In *chem-bla-ics*. chem-bla-ics. <https://doi.org/10.59350/g2ds0-81a33>

## Keywords

Cito, Citeulike

## Abstract

AJCann posted a blog today about what he doesn't like about Mendeley. Abhishek replied that he does not like people complain about one tool, instead of pointing out a good alternative. Mendeley has two alternatives, Zotero and CiteULike (there is also Connotea, but got behind in evolution).

## chem-bla-ics

AJCann posted a blog today about what [he doesn't like about Mendeley](#). Abhishek replied that he does not like people complain about one tool, instead of pointing out a good alternative. [Mendeley](#) has two alternatives, [Zotero](#) and [CiteULike](#) (there is also [Connotea](#), but got behind in evolution).

Agreeing with [@citeulike](#) and [@abhishektiware](#), as a service provider any bad news is good news too: they provide opportunities to improve. So, as encouraged to do so, I reported my long list of things I miss in CiteULike:

- @citeulike ok, one more. wish #18: get readermeter.org to also support citeulike
- @citeulike wish #17: allow people linking between papers in their libs using CiTO to annotate how they cite papers, see <http://ur.ly/lBUO>
- @citeulike wish #16: I think I saw images from some papers, right? how about doing that for #biomedcentral journals too?
- @citeulike wish #15: at the same <http://ur.ly/lIGn> page, the tag cloud should reflect tag use with font sizing
- @citeulike wish #14: upon 'post url', the first page with extracted information should allow marking as 'I am author' (cannot find that)
- @citeulike (new) wish #12: clicking an account name should get me to a public portal, rather than just his paper list
- @citeulike good point, wish #13: be more strong on requiring people to tag papers... and use article keywords as default tags
- @citeulike wish #11: remove 'no-tag' from tag clouds
- @citeulike wish #10: support #RDF export with BIBO and/or PRISM
- @citeulike wish #9: use #foaf for the RDFa for account pages, and to mark up friends
- @citeulike wish #8: and more generally, make #citeulike part of the #linkeddata network (provide an #rdf API)
- @citeulike wish #7: start using RDFa, e.g. with the PRISM ontology
- @citeulike wish #6: on an article page (like <http://ur.ly/lvWk>) summarize the network that bookmarked that article, not just the acc names
- @citeulike wish #5: don't show the 'copy' button for papers that are already in my archive (really a bug)
- @citeulike indeed, but don't or do it right... wish #4: allow people to have that link automatically point to an external blog
- @citeulike wish #3: provide summaries of lists, like article count per journal and article count per year
- @citeulike well, I'll use the blog functionality to summarize... wish #2: do not try to be a blogging platform
- @citeulike (new) wish #1: put automatically focus on text field after clicking search and select all text for easy deletion

The reports are now also available in the [fora of CiteULike](#).
