The image shows a screenshot of the OpenOffice.org Writer application. The main window, titled "Untitled 1 - OpenOffice.org Writer", displays a document with a chemical structure of benzoic acid (a benzene ring attached to a carboxylic acid group) on a shaded rectangular area. The structure is rendered in black lines with red oxygen atoms. A floating window titled "Object 1 in OpenOffice.org - JChemPaint" is open over the structure. This window has a menu bar (File, Edit, View, Atom, Bond, Tools, Templates, Help) and a toolbar. The main area of the JChemPaint window shows the same chemical structure. Below the drawing area is a toolbar with buttons for adding atoms (C, H, O, N, P, S, F, Cl, Br, I) and adjusting the zoom factor. The status bar at the bottom of the JChemPaint window shows the chemical formula  $C_7H_6O_2$  (6 Hs implicit) and a zoom factor of 100%. The main OpenOffice.org window's status bar at the bottom shows a page number of 0.33 / 0.19, a page size of 1.82 x 1.60, and a zoom factor of 136%.
