This blog is [almost 18 years old](#) now. I have long wanted to migrate it to a version control system and at the same time have more control over things. Markdown would be awesome. In the past year, I learned a lot about the power of [Jekyll](#) and needed to get more experienced with it to use it for more databases, like we now do for [WikiPathways](#).

So, time to [migrate](#) this blog :) This is probably a multiyear project, so feel free to continue reading it hear. Why? Because I start with the old posts :) Along the way, I am fixing things, improving it. I still have plenty on my todo list, but already happy with having learned [Font Awesome](#), which makes it easy to annotate with how I fixed broken links (or not). I now use three icons: a box for when I use the Internet Archive (they can use your donation); a 'recycle' icon when I found a new URL for the same page; and a broken URL link for other situations.

This is what it looks like:

### CDK-Taverna fully recognized

After asking about it, Tom explained me how [Taverna](#) can pick up the `apiconsumer.xml` file from jars: just copy it into the root directory of the jar package. Easy as that.

### CIA statistics for Blue Obelisk

I have just enabled [CIA](#) statistics for the [Blue Obelisk SVN](#): [/stats/project/cdk/blueobelisk](#).

### Single PDFs for CDK News articles

This week was the [CDK5AW](#) event, a workshop for users and developers of the [Chemistry Development Kit](#) (CDK). After talking with other developers we agreed on creating PDF and HTML versions of single articles that appeared in the [CDK News](#) newsletter. Well, I haven't figured out
