Keywords

Markdown, Wikipathways

Abstract

This blog is almost 18 years old now. I have long wanted to migrate it to a version control system and at the same time have more control over things. Markdown would be awesome. In the past year, I learned a lot about the power of Jekyll and needed to get more experienced with it to use it for more databases, like we now do for WikiPathways.

This blog is almost 18 years old now. I have long wanted to migrate it to a version control system and at the same time have more control over things. Markdown would be awesome. In the past year, I learned a lot about the power of Jekyll and needed to get more experienced with it to use it for more databases, like we now do for WikiPathways.

So, time to migrate this blog :) This is probably a multiyear project, so feel free to continue reading it hear. Why? Because I start with the old posts :) Along the way, I am fixing things, improving it. I still have plenty on my todo list, but already happy with having learned Font Awesome, which makes it easy to annotate with how I fixed broken links (or not). I now use three icons: a box for when I use the Internet Archive (they can use your donation); a 'recycle' icon when I found a new URL for the same page; and a broken URL link for other situations.

This is what it looks like:

CDK-Taverna fully recognized

After asking about it, Tom explained me how Taverna can pick up the `apiconsumer.xml` file from jars: just copy it into the root directory of the jar package. Easy as that.

Single PDFs for CDK News articles

This week was the CDK5AW 🗄 event, a workshop for users and developers of the Chemistry Development Kit (CDK). After talking with other developers we agreed on creating PDF and HTML versions of single articles that appeared in the CDK News ♻ newsletter. Well, I haven't figured out
