chem-bla-ics

OpenSource, OpenData and OpenStandards are not as strong in chemoinformatics as they are in bioinformatics, where it is common knowledge that sharing is a good. Today, the [JCIM](#) published on the web an [article](#) about the [Blue Obelisk](#) movement, which promotes these three ideologies.

Several open source projects participate, amongst which the [CDK](#), [Jmol](#), [JOELib](#), [OpenBabel](#), [Chemical Markup Language](#), [Bioclipse](#) and [Kalzium](#).
