I just found my student thesis in Organic Chemistry from my [Nijmegen](#) education. It's in Dutch, but I'll explore if I can upload this to [Radboud University's DSpace](#). But I could not resist sharing this nice scanning electron microscope picture :) Look at those amphiphiles show a nice chiral ribbon!

This disk also has quite a few raw spectra (as TIFF images). I'll try figure out what to do with those. Uploading as Open Data to [ChemSpider](#) is tempting, but I want to make sure I can easily have people download the collection too (read: programmatically).
