About a year ago I wrote about [free chemistry books](#) . No, not illegal copied books, but really free books (though, not necessarily Open). Actually, the books I discussed last year, those are out of copyright, as they are old. But, just today I ran into an advertisement for free books by [bookboon.com](#) (twitter:[bookboon](#)), and these are *new* books. I have not browsed them yet, but you can download textbook PDFs from these sections: [biology](#), [chemistry](#), [chemical engineering](#), [math](#), [nanotechnology](#), and several more. I do not know about the quality of these books yet, and they author names do not immediately ring a bell. Does anyone have experience with these books?
