chem-bla-ics

Where I was able to mention [earlier](#) that JChemPaint now runs with free (as in open source) Java virtual machines, I just tried to run the core Jmol renderer, using the [Integration.java](#) which comes as an example.

Sadly, the original screenshots got lost there were made with [jamvm](#) 1.3.3 and [classpath](#) 0.19.

It is very slow, however. I have not tried it with other free virtual machines, which are supposedly faster. It is a good start nevertheless: it means that a Jmol based [Bioclipse](#) plugin will work with free virtual machines too.
