With the [JChemPaint workshop](#) just passed, there is much work from UU and the EBI to be integrated. Moreover, [Rajarshi](#) just merged a lot of fixes from CDK 1.2.x into the [master](#) branch, which will be a big rebase too. That said, I need to do this to recalculate source code statistics for the CDK.

The current set of JChemPaint patches looks like:

The two top most branches (*bioclipse-2.1.x* and *12-ebiStage*) are actually staging branches: patches that have not yet been integrated into the JChemPaint-Primary branch. Likewise, the *0-other* branch is a staging branch for patches that are in or up for the review process for CDK *master* itself.

This will mean that I am now going to rebase all these branches once more.
