Some time ago [Noel ran a poll](#) on *chemoinformatics* and *cheminformatics*, so I set up a poll too in [part #1 of this series](#) . The outcome is clear:

The [Obernai meeting](#) strongly suggested *chemoinformatics* [1], but the start of the open access [Journal of Cheminformatics](#) is the killer. I can no longer resist: I'll follow the wish from my [advisory board](#) , and the general trend around the world ([except India](#)).

The journal's editor-in-chief is David Wild, while [Christoph Steinbeck](#) seems to be going to [lead the European branch](#). People seem [to like the idea](#). The journal will clearly be in direct competition for market share with the [JCIM](#), [QSAR & Combinatorial Science](#), and even the open access [Chemistry Central Journal](#). Interesting to see where this is going...
