Just updated Bioclipse2 with Jmol 11.6 RC 18:
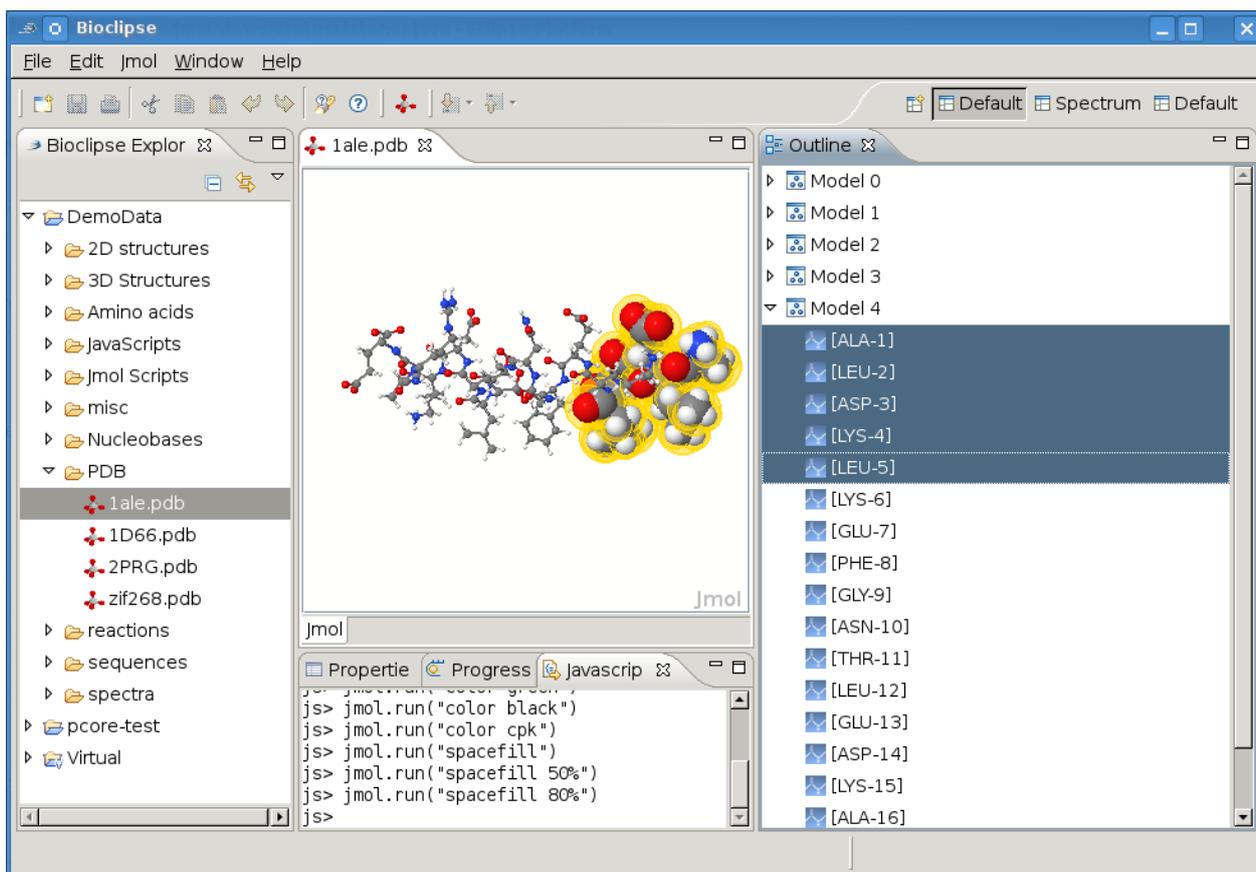

Now working in Uppsala makes Bioclipse my default life sciences platform, and I'll be porting older Bioclipse1 plugins to Bioclipse2, which has a much better architecture.

Bioclipse2 does not have a native Jmol Console, but script commands can easily be run with `jmol.run()` (written by Jonathan). I wonder if it would be hard to have a JmolScript view like this JavaScript Console... The outline on the right (written by Ola) allows me to navigate the Jmol data model.
