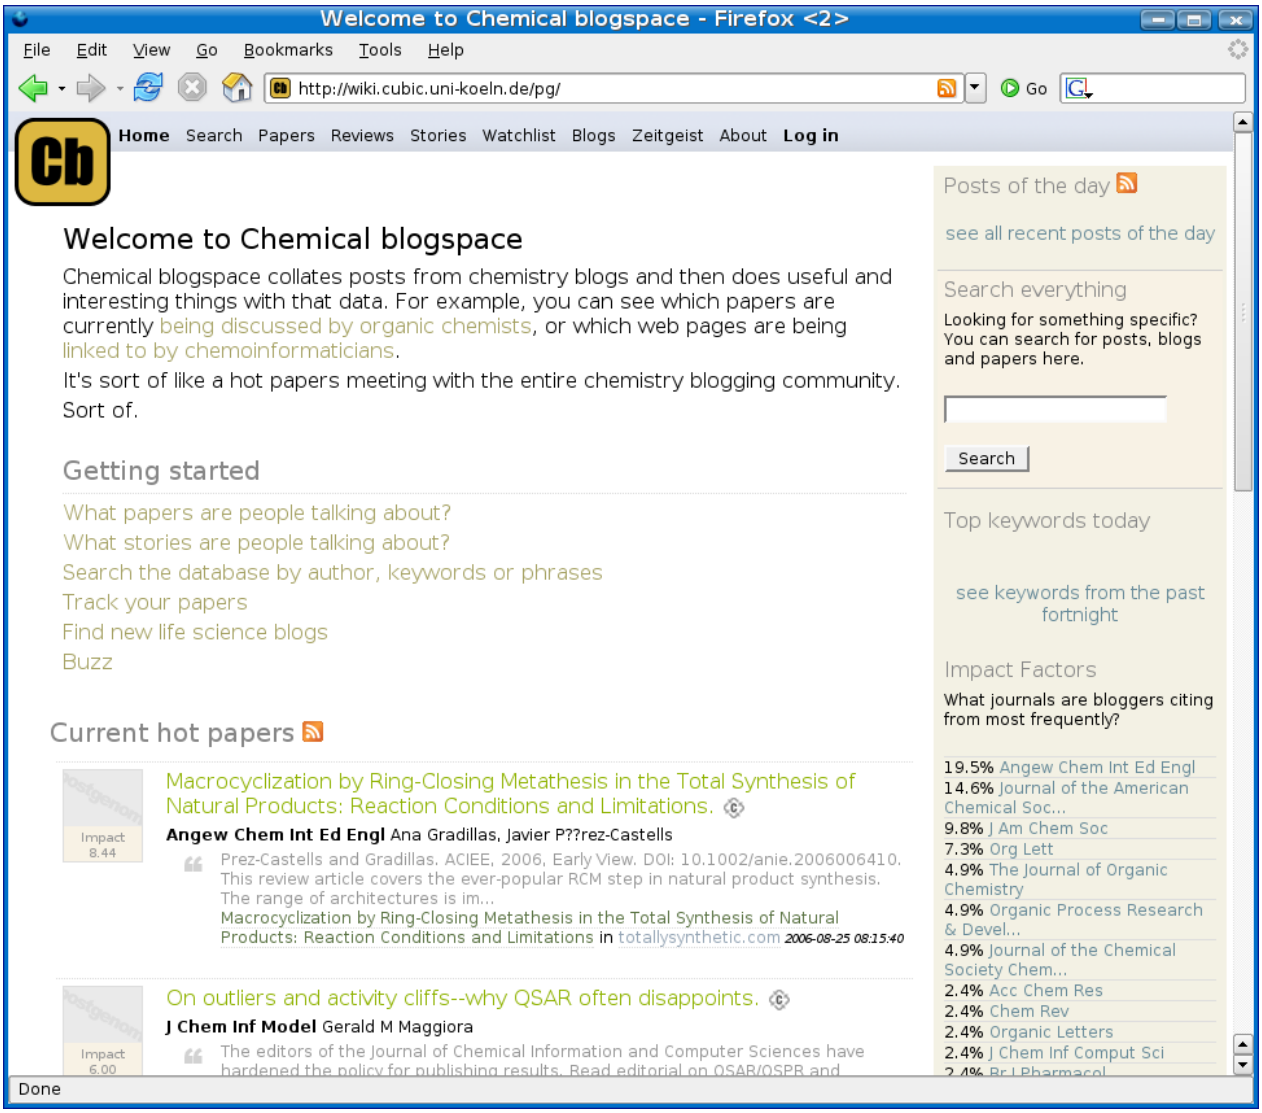
We all know chemical space; Chemical blogspace (Cb) is different: it is the chemistry discussed in blogspace. Cb is build on the opensource software of Postgenomic.com which I bloged on before . The now running Cb aggregates 19 blogs and, like the original, extracts linked (cited or reviewed) articles from literature.



The system is beta, but I am happy about it already that I mention it now. For example, some article titles are not properly recognized, and some journals are known in the statistics in several formats. And, more importantly, I have not yet hooked in the InChI support I developed earlier.

So, if you like the idea, or know other interesting scientifically interesting chemistry blogs, leave a comment, or send me email.
