Below should show up the wave (that is, if you have a [Google Wave](#) account), about a piece I am writing for a course on PhD Supervision I am following. The aim is to dig up *old* standards and how they apply to Web 2.0 technologies, including wikis, waves, blogs, source code repositories etc.

Update: there seems to be some problems even for those who have a wave account to load the wave. Not sure why that is happening. I'm using the [Madoqua robot](#); should I be using something else?

Update: this technology is long gone, and I replaced the whitespace with displaying the underlying HTML as a code block:

```
<div id="wave1" style="width: 500px; height: 420px;"></div>
```

```
<script type="text/javascript">
  var wave = new WavePanel('https://wave.google.com/wave/');
  wave.setUIConfig('white', 'black', 'Arial', '13px');
  wave.loadWave('googlewave.com!w+2gYDmL7eA');
  wave.init(document.getElementById('wave1'));
</script>
```
