Abstract

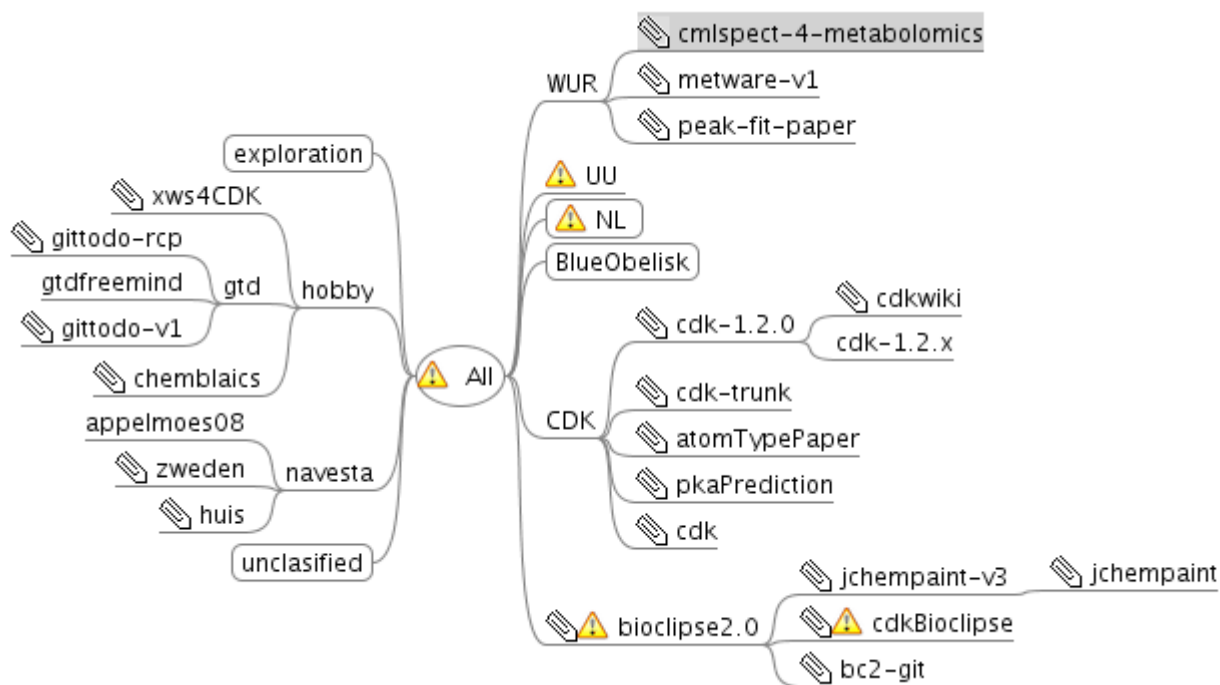

About a week ago, I hooked up my GitToDo software with Freemind. This allows me to organize the projects I am working on, without having to code this in GitToDo directly.

About a week ago, I hooked up my [GitToDo](#) software with [Freemind](#). This allows me to organize the projects I am working on, without having to code this in GitToDo directly. I also immediately take advantage of visualization, for example, adding an icon for projects with one or more TODO items marked TODAY or URGENT:

Keeping my GitToDo repository synchronized is as easy as typing:

```
gtd-freemind-update
```

```
gtd-freemind-show
```
